Boss Bottle Lock

No bottle tag is more secure, faster to apply or remove at the POS than the Bottle Lock. Strong, versatile and front on looks great.

Transparent Cap ·········

Transparent

When merchandised front on, the Bottle Lock is almost invisible to the customer as its clear face does not detract from the bottle and its branding.

Easy Application

One handed application and removal makes this product a breeze compared to many other bottle security caps or the lesser secure bottle wraps.

Electronic Article Surveillance

Securely applied to high theft liquor, the Bottle lock contains an Electronic Article Surveillance (EAS) element to set off alarms at the door. It has been optimised for fast, single-handed removal at point of sale and has a clear cap to minimise the impact on shelf space and bottle branding.

Easy Application and Removal

The Bottle Lock has the added feature of completely encapsulating bottle caps and corks to deter theft even in environments where EAS has not been adopted - this is a true benefit denial feature.
