

Unlock your full Omnichannel POTENTIAL

Our game-changing RFID solutions give retailers perfect inventory visibility. Real-time insights from our cloud-based RFID solutions enable our customers to unlock omnichannel, optimise the product availability and create seamless check-out experiences.

Inventory Visibility

Retailers increasingly place the consumer in the center of their supply chain. But true customer-centric retailing requires 100% inventory visibility of each individual item to be able to let the customer decide how he wants to order, receive, pay for and return items. This means that items move up and down between the DC, stores and customers.

To provide full inventory visibility, Nedap offers iD Cloud an end-to-end RFID software platform that makes it possible to track each item from source to store.

Shrink Visibility

The customers' search for more convenience and a better shopping experience also makes controlling shrinkage a greater challenge.

For example; customers no longer accept to wait in line to check out, they want to skip the line and check out anywhere in the store using their own mobile phone or a self-checkout station.

To achieve full shrink visibility, we've designed the Nedap iD Top an RFID-based EAS solution that can easily detect what leaves the store unpaid, giving you real-time actionable data and insights.

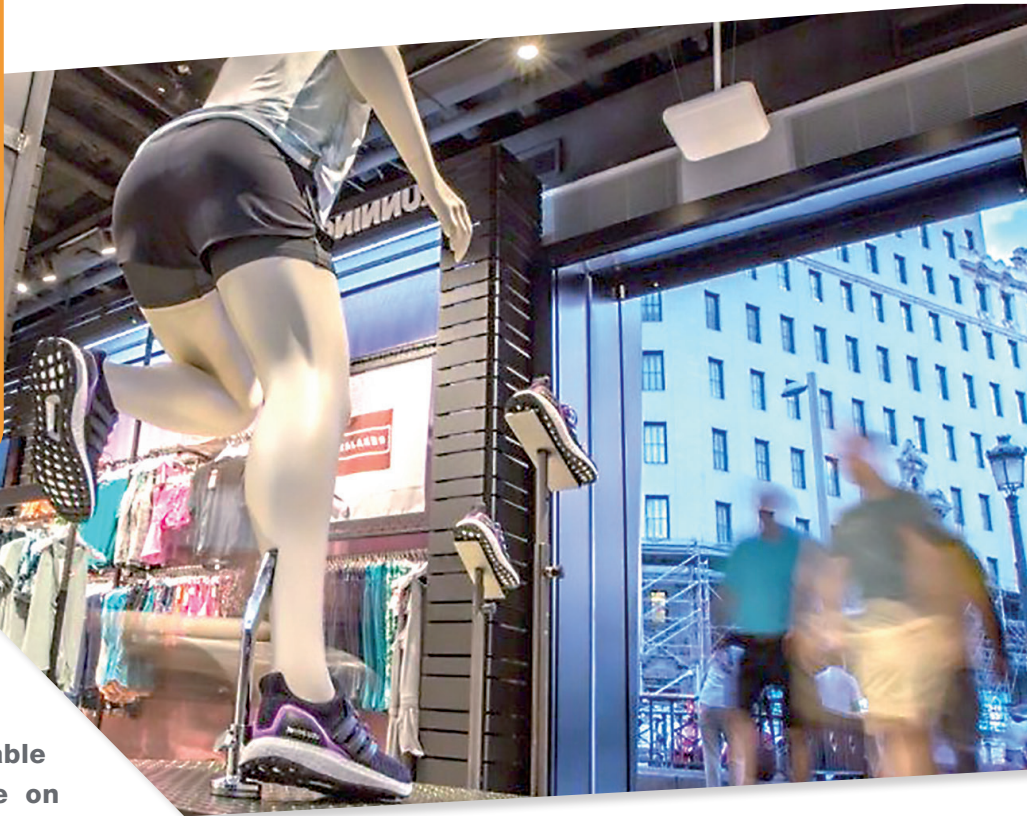

iD Cloud give you insights like:

- Which items are available in which location?
- Which items are (not) on display?
- Which items have never been presented on the sales floor?

The iD Top provides insights like:

- Which item triggered an alarm - when and where?
- Which items have a high theft-risk in this store or region?
- Items being used for sweathearting or return fraud.

Meet the Global RFID Leader

Virtual shielding

Shielding is necessary to get reliable data which items are available on the sales floor and which items are located in the stock room.

However, the application of 'physical shielding' is a major (hidden) cost for retailers rolling out RFID. The 'virtual shielding' feature in the Nedap iD Cloud software reliably determines the location of an item through a smart allocation algorithm that prevents leakage and eliminates the need for physical shielding.

Integrations

Nedap iD Cloud has off-the-shelf API integrations with a wide range of POS/ERP systems, RFID hardware and add-on software applications.

All API's are accessible to our customers or 3rd party solution providers. This means that iD Cloud can be easily be extended or integrated with other RFID applications in your stores, the distribution centers or higher up in the supply chain, making it easy for you to tailor the total RFID solution to your needs - today and in the future.

Scalability

We built a native cloud solution that ensures perfect scalability. It takes 1 minute to set up Nedap iD Cloud for one store, 5 minutes to train a new user and it just as easily scales to hundreds or thousands of stores.

The state-of-art database technology foundation of Nedap iD Cloud is able to support the billions of events generated by RFID readers and applications along the supply chain.

Customers already RFID ready

Nedap RFID Hardware available now
iD Cloud Software coming to APAC soon, register your interest at:
