

6670172 Software Analytics Standard

Analytics services offer data & insights, generated from your Visitor Counters and your EAS estate. In international retail organizations, management is becoming increasingly complex and time consuming.

To help retailers with this challenge, Nedap has developed Analytics Services, which makes sure that you know precisely which stores need your attention.

Software Analytics Standard gives detailed insight in customer counting information and alarm data. This helps you to permanently reduce losses and increase the performance of individual stores.

The package includes Annual license for customer counting information and alarm data in Nedap Retail Analytics.

Specs

	Starter	Standard	Plus	Extended
